

BHARATH KUMAR DASARI

Mobile: 7095040710 Email: bdasari2208@gmail.com

PROFESSIONAL SUMMARY

Aspiring DevOps Engineer with strong foundational knowledge in CI/CD, containerization, Kubernetes orchestration, and cloud platforms. Hands-on experience building automated deployment pipelines using GitHub Actions, Docker, and Kubernetes. Skilled in AWS services, Infrastructure as Code, Linux administration, and monitoring tools. Seeking an entry-level DevOps role to contribute to scalable, secure, and automated cloud environments.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, IAM, EBS, ELB, SNS, SES)

DevOps Tools: Docker, Kubernetes, GitHub Actions, Terraform, Ansible, Maven, SonarQube

CI/CD: GitHub Actions, Automated Docker Image Build & Push

Monitoring: Prometheus (Metrics Exposure & Scraping)

Operating Systems: Linux (User Management, File Systems, Disk Management)

Scripting & Programming: Python (Flask), Shell Basics

Version Control: Git, GitHub

Container Registry: DockerHub

PROJECT EXPERIENCE

Automated Container CI Pipeline using Docker & GitHub Actions

Designed and implemented a Continuous Integration pipeline that automatically builds and pushes Docker images to DockerHub upon code commits.

- Developed a Flask-based web application.
- Containerized the application using Docker.
- Configured GitHub Actions workflow for automated image build and push.
- Secured pipeline using GitHub encrypted secrets.
- Eliminated manual deployment steps through automation.

Scalable Kubernetes Deployment with Replica Management

Deployed a containerized application to a Kubernetes cluster with replica scaling and service exposure.

- Created Kubernetes Namespace for environment isolation.
- Implemented Deployment and ReplicaSets for high availability.
- Configured NodePort Service for external access.
- Scaled application replicas dynamically.
- Troubleshoot image pull errors and pod crashes using kubectl logs.

End-to-End DevOps Pipeline with CI/CD, Kubernetes & Monitoring

Built a production-style DevOps pipeline integrating CI automation, container orchestration, and application monitoring.

- Automated Docker image builds via GitHub Actions.
- Deployed scalable application to Kubernetes cluster.
- Implemented Prometheus metrics endpoint for observability.
- Configured service-based metrics scraping.
- Managed replica scaling and service networking.

EDUCATION

Master of Computer Applications (MCA) – 75%

Rayalaseema University, Kurnool

INTERNSHIP EXPERIENCE

DevOps Intern (Certificate Awaited)

- Assisted in containerization and deployment tasks.
- Worked with Linux-based environments.
- Supported CI/CD pipeline configuration activities.
- Gained exposure to AWS cloud services and DevOps practices.

ADDITIONAL INFORMATION

Strong understanding of DevOps lifecycle and cloud deployment strategies.

Quick learner with ability to adapt to new technologies.

Passionate about automation, scalability, and system reliability.
